desertification control and rangeland management leaf compost music of the hills by saki author bio introduction it was in the 1980s that the word sustainability in regard to an environment began to be associated with nature environment agriculture and thus gardening horticulturalists believing in sustainable agriculture decided that it was easier for humans to use natural resources in a way to get better yields they have been doing this for millennia however this drain on the natural resources was going to cause the depreciation of such resources one time or the other because mother nature cannot keep nourishing and replenishing her without getting back something of what she gave and this gave rise to the concept of sustainable gardening harvesting things you have grown your own self from your garden is such a positive feeling of achievement the idea was that use what you can from nature's bounty and then give back to her what you can so that you and she work in tandem in a symbiotic relationship so all of us home gardeners can use sustainable gardening tips to make beautiful gardens with eco friendly designs use of biodegradable materials use of organic fertilizer and using native plants to sustain the environment and make a sustainable garden a fruitful harvest is a lovely thing god wot 14th century saying when i was being taught agronomy at college in the 80s nobody bothered about sustainable gardening that was because in the east the traditional agricultural practices were with the use of natural resources because the agricultural traditions still belong to the middle 14 century in many parts of the country that is why what is considered sustainable and organic gardening in the west today was an integral part of human existence in the indian subcontinent at that time we used organic fertilizer we did not know about chemical pesticides or hormones on the flipside we did not know about agricultural development which was taking place all over the world to get a better yield of food and crops and that is why we relied on just the monsoon to feed our crops and prayed to the rain god if he did not come on time we would be sunk the bank and the money lender would take our land and then there would be no resort but to starve or go to the city to survive or lend ourselves out in bonded labor to a more prosperous farmer this may sound shocking to people in well developed countries but this is still the sort of existence which is being led by people in many parts of the world even today in this day of state of the art technology and technological development underdeveloped countries still follow obsolete agricultural practices which do not take into account the natural resources already around them and so famine has been a part of their lives for centuries so here are some rules which you are going to implement right now to make sustainable gardening possible
